INCREASE YOUR CAPACITY!

LOGOSOL BOARD EDGER C210

"As an experienced sawyer, I really appreciate a quick handling of the boards. What a great flow this machine gives!"

Increase your capacity with a board edger from LOGOSOL

A safe and affordable board edger, and perfectly suited to small-scale sawmills — now there is one! With LOGOSOL's Twin-Blade Board Edger C210 you get a Swedish-made quality machine at a price that is far below our competitors.

Efficient Production

With LOGOSOL's board edger C210 it has never been more profitable or easier to get a good result. With the patented design you can from a compact machine get the result that you earlier could get only from the more expensive board edgers. You increase your production significantly, no matter if you have a LOGOSOL sawmill, a band sawmill or a circular saw. You get more out of the log, and, in addition, you get a streamlined operation when edging boards in a separate machine instead of doing it on your sawmill.

Make Use of the Most Valuable Timber

The board edger is primarily used for edging boards from the log sides. These boards are often called the fillets of the log. They are usually knot-free and used in industrial production of mouldings and joinery. As a sawyer it feels good to be able to make use of

this valuable timber, which otherwise usually ends up in the woodpile.

Optimize production by placing the C210 close to your sawmill. You can continue sawing while the board edger is doing its job. This machine is easy to use and after a few simple steps you have got started. The board edger can stand being used outdoors. All electrical equipment is enclosed and all parts are rustproof, except for the circular sawblades, but they are protected under the cover and will not rust in the first place.

Unlimited Width of the Workpiece

The board edger's stepless adjustment of width makes exact setting of the machine easy. The circular sawblades can be laterally adjusted from 30 to 210 mm (1 3/16"-8 5/16"), but the workpiece can be significantly wider than that. Its unique design, where one side at the machine table is open, means that

there is no limit to how wide boards you can feed in. Just set the desired width and send the timber through. The board is edged in a quick and controlled operation.

Powerful Feeder

The integrated feeder consists of two big serrated feed rollers, both for in- and out-feeding. In its basic design, the feed rate is 15 m/min (49ft/min). If you want to increase the speed, the gear can easily be replaced.

Energy Efficient

Maximum height of the workpiece is 38 mm (1 1/2"), which is more than enough when it comes to edging boards. By limiting the cutting height, smaller sawblades and motors can be used. This gives low operating current, which can be crucial when running the sawmill on the same fuse. In addition, it gives a compact and affordable machine.

- The board is edged in a quick and controlled operation. Edging in a separate machine saves a lot of time.

- Double circular sawblades with carbide teeth stay sharp tens of thousands of metres.

- The side cover is opened by the workpiece when you are edging wide boards.

- Side fence for resawing already edged boards or for making laths.

LOGOSOL BOARD EDGER C210

- ✓ The patented design in a compact format gives accurate results.
- ✓ Cut as wide workpieces as you like!
- ✓ Edging boards becomes a convenient and profitable task
- ✓ Due to its unique design it is the safest board edger ever.
- ✓ Greater timber yield!
- ✓ Higher capacity in your production line.
- ✓ You work faster and the working process becomes convenient and fun.
- ✓ Smart solutions make a machine that is easy to own.

See the video about
the Board Edger on

✓ The three motors of the machine are operated from the control panel.

TECHNICAL DATA: C210

Max. width of workpiece:	Unlimited
Max. edging width:	210 mm (8 5/16")
Max. thickness of workpiece:	38 mm (1 1/2")
Feed rate:	15 m/min* (49ft/min)
Weight incl. machine stand:	240 kg (529 lbs)

*Can be adapted according to your requirements.

PAYMENT METHOD

Payment in advance via T/T (wire transfer) to our account: When you have placed your order you will receive a confirmation of your purchase and a notice of delivery time. You can then pay the money into our account.

Payment via credit card: The money is reserved and will be deducted from your account when the order has been shipped from LOGOSOL.

Payment via L/C (Letter of credit): Please contact us for more information.

THIS IS HOW YOU ORDER

Please find your local distributor on www.logosol.com or call LOGOSOL Sweden: +46 (0)611 182 85. Webshops are available on selected markets, see more about this on www.logosol.com.

Do not hesitate to ask us for advice on how to utilize your sawmills in the optimal way. We have more than 20 years of experience of developing and producing sawmills and woodworking machines. Our products are delivered to all continents which has given us a great knowledge about saw techniques in all kind of circumstances and conditions.

You are warmly welcome to contact us!

TWO-YEAR WARRANTY

Doing business with Logosol is safe. We provide you a two-year warranty on our machines. The warranty covers manufacturing defects and problems that have occurred during normal use of the machines, with the exception of consumable items such as belts, guide bars and chains.

2 MONTHS MONEY BACK GUARANTEE

Logosol gives you a two months money back guarantee on all machines. This means that when you have paid for the machine, you have two months to decide whether the machine suits you. If you want to return the machine, you only pay for the return freight. Cutting equipment and other consumable items are not included in the money back guarantee.

SERVICE ALL OVER THE WORLD

The distributor in your country provides service on the products. At our headquarters in Sweden we are prepared to offer Logosol customers our more than 20 years of experience in designing and working directly with Logosol equipment. We will give the consultation in English by phone or e-mail.
